### PERSONAL PROFILE

I am a Software Developer with experience as an Account Executive looking for my second role. I have completed a JavaScript bootcamp with training provider Northcoders, as well as a certificate in PHP from Codecademy. I am conscientious, used to working with clients in a professional context, and dedicated to continuous personal development.

I want to create technology which is both ethical and accessible; not just in the way it is used, but in ease of understanding. This allows both users and clients to make informed decisions about how they use this technology, and therefore to get the best use out of it.

---

### SKILLS

- |              |             |
|--------------|-------------|
| • JavaScript | • SQL       |
| • Node       | • Postgres  |
| • HTML/CSS   | • Jest      |
| • Express    | • Supertest |
| • Knex       | • Umbraco   |
- 

### EXPERIENCE

#### FULL-STACK DEVELOPER

##### MKSAM, MACCLESFIELD | 06/2021 - Present

My priorities at MKSAM were split into three broad areas; to develop client websites in Umbraco and RiSE (the iMIS CMS), to become proficient in the iMIS membership management software, and to offer general IT support to customers and colleagues. My responsibilities also included creating reports in Crystal Reports, and to query client databases in SQL Management Studio. It was also necessary to juggle operational and project work due to clients needs.

Working alongside the now departed Website and Database Manager, my proudest achievement has been the development of two websites for customers ahead of their upgrade to the newest version of our membership management system. This included recreating both of these websites in the chosen CMS, making sure the CSS matched the previous style, and maintaining the functionality of each site comparable to the previous version to minimise client disruption.

#### TRAINEE SOFTWARE DEVELOPER

##### NORTHCODERS, MANCHESTER | 11/2020 - 03/2021

My time at Northcoders focused on software development using JavaScript, also covering principles such as pair-programming and test-driven development. Projects I have completed include:

*Backend Project* - a news site which uses Express and Postgres to make requests to a database of news articles, and tested using Jest and Supertest. The project is a work in progress, with more endpoints and functionality planned as it grows alongside the frontend

site. Link to repo: <https://github.com/lchapmb/be-nc-news> Link to hosted API: <https://nc-news-today.herokuapp.com/api>

*Frontend Project* - a news site which React to display articles based on topic, as well as associated comments for each article. The site was designed mobile first, responsively, and with accessibility in mind. This will also soon include new CSS for larger view screens, and the ability for users to vote on articles and comments. Link to repo: <https://github.com/lchapmb/nc-news>

*Final Project* - working in a team of five, we created an order tracking app called Table Tracker, aimed at helping restaurants track order flow. In the backend, we used PostgreSQL to create a relational database which linked up to a React based frontend. We used Firebase Authentication for login, as well as implementing context and hooks for the first time. Our API was created using the Express JS web framework, following MVC architecture, and Knex JS for building queries. I'm hoping to develop the project further, now I have completed the bootcamp, including potentially hosting the project. Link to frontend repo: <https://github.com/lchapmb/Table-Tracker> Link to backend repo: <https://github.com/lchapmb/table-tracker-back-end>

*Portfolio* - my portfolio site, built with vanilla HTML/CSS. Allows visitors to view contact information, my CV, and links to social media. Planned development includes more detailed project pages, and some tweaks to the styling. Link to repo: <https://github.com/lchapmb/lchapmb.github.io> Link to hosted site: <https://lchapmb.github.io/>

## **CAREER BREAK | 01/2020 - 10/2020**

I decided to take a career break in order to do some travelling, and to find out what I wanted to do next. It soon became clear that I would not be able to travel as extensively as planned due to the Covid-19 pandemic, and I started to explore online courses which may help my career.

This included completing the Responsive Web Design Certification on freeCodeCamp.org, and using Raspberry Pi micro-computers for projects like building a gaming emulator and a music player. I was inspired to spend more time on coding, and so began researching languages to learn. I decided to pursue JavaScript based on how in demand it was among employers, the accessibility of learning resources, and the variety of projects possible using the language. Northcoders in particular stood out as a training provider with an excellent track record in helping Junior Developers launch their career.

## **ACCOUNT EXECUTIVE**

### **PRINT SEARCH LIMITED, TRAFFORD PARK | 07/2018 – 12/2019**

- Primarily responsible for administrative and project support services for the Account Directors and Managers

---

## **OTHER EXPERIENCE**

My previous experience includes interning as a Reporter, and I graduated with a degree in Philosophy and Human Rights. My hobbies include playing guitar and singing, as well as drawing, writing, and I was the President of the Judo club at university.

Growing up, my use of computers earned me a reputation within my family, and I naturally became the resident tech support. I remember my first time learning about how websites were put together; it was thanks to MySpace's use of HTML in profile design. My friends and I would find little bits to add to our profiles, changing the layout or colours manually, or with snippets we had found online. More recently, I have spent some time playing the Raspberry Pi computers, creating a Spotify player, and a retro gaming emulator.
